

## e-Learning in a Box™

### *KX releases e-Learning in a Box V.4.0 with new functionality and choice of database*

#### FOR IMMEDIATE RELEASE

DELMAR, NY, May 31, 2006 – KnowledgeXtensions, Inc. (KX), known worldwide for its Personalized Learning technology, today announced the release of **e-Learning in a Box™ V.4.0**, an enhancement to its complete e-learning system targeted at small and mid-sized businesses and organizations.

To keep up with an expanding user base, which now includes larger corporations with 1,000s of employees, **e-Learning in a Box™ V.4.0** offers customers the choice of either MySQL or SQL server as the supporting database, facilitating reporting of training results and integration with other systems. A streamlined user import functionality allows companies with large employee populations to import trainee lists quickly and easily. Employees can be grouped by office, division, role or other segments to mirror internal company organization.

On the learning side, courses have a new *look and feel* to reflect up-to-date on-line content design and take on a more professional presentation of the learning material.

Chief Strategic Officer Louis Garguilo said: “While our target market for **e-Learning in a Box™** remains small to mid-sized businesses and organizations, our clientele has broadened to include larger companies and consultants serving various industries. It turns out that much of the functionality and presentation changes our larger clients needed also increase the appeal of the product across market segments.”

**e-Learning in a Box™ V4.0** also tracks the amount of time each employee spends in courses and other learning material, and allocates credits based on time spent in study.

KX, a private company that does not release client lists, has reported expanded sales both in the U.S. and Japan – the company’s second largest market.
